

# Disabled Toilet/Bathroom Alarm Systems

For applications in the toilet and bathroom area have the DTA range of alarms. The DTA 1 system comprises of wall mounted components, whereas the DTA2 system comprises of wall and ceiling components.

Operation – to initiate a call, simply press the call button or pull cord, to activate the system into an alarm mode. This activates a room indicator attracting attention both visually and audibly and illuminating the all reassurance LED's.

Simple cancellation of the system is made at the reset unit. All reassurance lights drop out and the system is ready for the next call.

**Wall Mounted Component for the DTA1 System**

1	20-101	Call Unit with pullcord and reassurance
2	FLSY2205	Room Indicator flasher/sounder
3	20-102	Reset Unit with reassurance
4	MIM8118	10VA transformer 230VAC/24VAC

**Ceiling Mounted Component for the DTA2 System**

1	FLSY2210	Ceiling Pull Unit with pullcord and reassurance neon
2	FLSY2205	Room Indicator flasher/sounder
3	20-102	Reset Unit with reassurance
4	MIM8118	10VA transformer 230VAC/24VAC

Note: 20-101 call unit can work normally without the pull cord installed.

Note: The FLSY 2205 room indicator has the capacity for 8 call and 4 reset buttons, and 2 potential free relays for interfacing into building management system or other non system equipment.

Note: For larger installations a 10-way panel is used as a central display to which calls are directed. This panel has a mute facility for sound, and an Led indication for each calling zone.

Cancellation can also be made at the 10-way panel.
