Electrical installation instructions

CEL LI SAL Series have two cable glands for easy chaining without external distribution boxes. Connection can be protected with a 6A or 10A fuse or with a circuit breaker (C curve: C6A or C10A).

Configuring CEL LI SAL Series

Photocell mode (enabled/disabled) and threshold (400 lux, 800 lux or 1600 lux) can be selected by the user using DIP configuration switches.

Open three screws on the bottom of CEL light to gain access to DIP switches. We recommend using a socket wrench but the screws can also be opened with a suitable flat-head screwdriver. Holding the aviation obstacle light glass dome pointing upwards, the individual DIP switches are numbered 1-4 from left to right.

Installation specifications

- Cable gland M25
- Cable diameter 11 to 17mm
- Wire diameter max. 6mm²
- Recommended cable
3x1.5mm² or 3x2.5mm²

Options

- CGS-20 Smaller cable glands
Set includes 2 pcs M20 cable glands with M25-M20 adapters for 7-13 mm cables

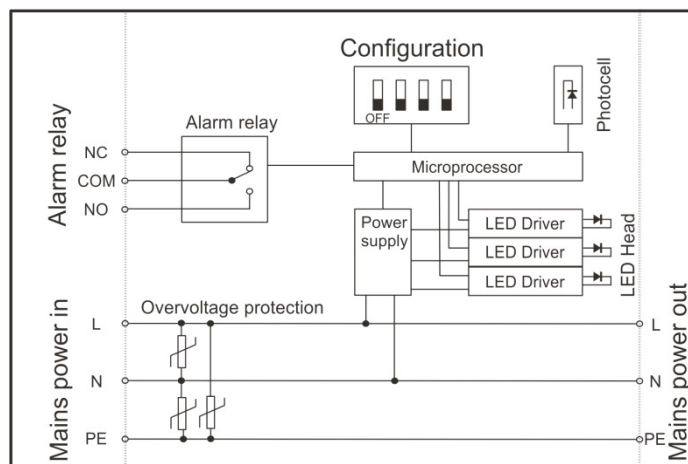

1. Bottom plate screws

2. Location of DIP switches

| DIP Switch Settings-Photocell mode | | |
|------------------------------------|-----|--------------------|
| 1 | 2 | Operating mode |
| OFF | OFF | Photocell disabled |
| ON | OFF | 400 lx |
| OFF | ON | 800 lx |
| ON | ON | 1600 lx |

| DIP Switch Settings-Flash mode | | |
|--------------------------------|-----|--------------------------|
| 3 | 4 | Operating mode |
| OFF | OFF | Steady-burning i.e.fixed |
| ON | OFF | 20 flashes per minute |
| OFF | ON | 40 flashes per minute |
| ON | ON | 60 flashes per minute |

3. Block diagram of CEL LI+IR stand-alone light.

Factory default setting is all switches in OFF (steady-burning mode without photocell control). Turn-off time in 3 min, turn-on time is 10 sec. When the photocell operation is enabled, the obstruction light turns on when the ambient light level has dropped below selected level for ten seconds. Light turns off when the ambient light level has exceeded the selected value for more than three minutes.
